

eBacon Partners with IVO Systems to Deliver Comprehensive Operations and Payroll Solutions for Heavy Civil Construction

Leading construction payroll platform joins forces with equipment management specialists to address industry's most critical operational challenges

Phoenix, Arizona – September 17, 2025 – eBacon, a leading construction payroll and compliance platform specializing in prevailing wage and fringe benefit management, today announced a strategic partnership with IVO Systems, a premier provider of heavy civil construction operations software. This collaboration will deliver integrated solutions that address two of the most complex operational challenges facing heavy civil contractors: payroll compliance and equipment management.

The partnership combines eBacon's expertise in prevailing wage compliance, fringe benefits, certified payroll reporting, and union reporting with IVO Systems' comprehensive equipment tracking, crew scheduling, and maintenance management capabilities. Together, these solutions provide heavy civil construction companies with a unified approach to managing their most critical operational needs.

"Payroll and equipment management are two of the biggest operational headaches for heavy civil contractors," said Gary Zimmermann, Director of Strategic Partnerships at eBacon. "Our partnership with IVO Systems means companies can rely on proven, purpose-built solutions designed specifically for their industry, rather than trying to make generic software work for their unique needs."

Heavy civil construction companies operate in a complex regulatory environment where prevailing wage compliance is mandatory, and equipment downtime can derail entire projects. eBacon's platform ensures contractors maintain full compliance with federal, state, and local wage requirements while streamlining certified payroll processes and fringe benefit administration. IVO Systems complements this with their equipment-focused modules, including digital magnet boards for real-time equipment tracking, preventative maintenance dashboards, and work order management systems.

"This partnership represents our commitment to providing construction companies with comprehensive solutions that actually work for their business," said Eric Christensen, Founder and CEO of IVO Systems. "By combining eBacon's payroll expertise with our equipment management platform, we're giving contractors the tools they need to focus on what they do best – building critical infrastructure."

The integrated approach addresses the interconnected nature of payroll and equipment management in heavy civil construction, where accurate time tracking, equipment utilization, and labor compliance must work seamlessly together to ensure project profitability and regulatory adherence.

Both companies serve the specialized needs of heavy civil construction contractors who work on infrastructure projects, including highways, bridges, utilities, and municipal construction, sectors where compliance requirements are stringent and operational efficiency is essential for success.

About eBacon: eBacon is a leading construction payroll and compliance platform that specializes in prevailing wage and fringe benefit management for contractors working on public and private construction projects. The platform provides comprehensive solutions for certified payroll reporting, union reporting, and HR management, ensuring construction companies maintain full compliance while streamlining their administrative processes.
